If you are looking to use Photoshop you have two options: you can use Adobe Photoshop CC or Adobe Photoshop CS6. While these are both advanced editors, the difference is in their pricing. If you are looking for a new photo editor, Photoshop Elements should be your go-to software. Here are the top features of Photoshop. Overlay Overlay is an advanced, yet easy to use, tool that lets you duplicate, distort, deform and move the layer and its contents. Using the Overlay tool, you can duplicate an image to create multiple layers of the same image. You can use its filters to distort an image, even add visual noise and blur. You can also move the entire image and its contents using the tools. The tool is great for duplicating and recoloring photographs. Using the overlay makes it very easy to create new images from a single source. You don't have to do much if you are looking to create a new image of any kind. Mask As the name suggests, the mask is a selection tool that lets you select areas of an image and keep the rest of it to be untouched. The mask allows you to edit and correct an image with a very specific area of the image. Its selection is often used to create a specific shape in your image. You can also combine the mask with the filter to create interesting effects. Lens Correction The lens correction tool is part of the Camera Raw and Photoshop CS6. It lets you adjust the image differently with the help of Radial Filters. There are 6 different types of radial filter, each of them has different settings. These filters are great for correcting and making your images look unique. You can adjust the levels with the same tool. Contrast and Saturation The contrast and saturation tool lets you modify the contrast of an image and its color, using sliders. You can also change the color of shadows, midtones and highlights. The tool is useful if you want to change the mood of an image. You can use filters to adjust the color level in an image. Color Palette Color Palette is a tool that lets you create customizable palettes of colors. It comes with 506 palettes. You can also create your own customized palette of colors. It has its own filter and a color picker 05a79cccf

Q: The solution of a simple differential equation My exercise was to find the solution of the equation $Sx'^prime + ax^4 = 0$ And I got the equation $Se^{-(\alpha t + \beta)}$ But my teacher told me that $Sx=e^{-t/4}$ Did she made a mistake? The original equation was $Sx'^prime + ax^4 = 0$ and I need to find the $S\alpha$ and $S\beta$ A: Your reasoning is correct. You can also solve the equation by writing it in the form: $xx=e^{-\frac{1}{4} + \sqrt{4a+1}}\sin(t) + C$ and so $xx=e^{-\frac{1}{4} + \sqrt{4a+1}}\sin(t) + C=e^{-t/4}$ which immediately tells you that $SC=0$. Q: How to add a number of image selected dynamically in android I am new to android. I am trying to show multiple images in a ImageView by clicking a button. Every time the user clicks the button, the selected images should be added to a list. I am able to click a button and add a single image to the list but cannot add multiple images. Can anyone please help me? Thank you Following is the code public class UploadViewActivity extends Activity { Button addBtn; ListView listView; ArrayAdapter adapter; ArrayList items = new ArrayList(); ArrayList selected = new ArrayList(); int imgIndex = 0; @Override protected void onCreate(Bundle savedInstanceState) { super.onCreate(savedInstanceState); setContentView(R.layout.activity_upload_view); addBtn = (Button)findViewById(R.id.btnAdd); addBtn.setOnClickListener
