Koutsoyiannis Modern Microeconomics Pdf Free 148

Full Text Available This paper deals with the problem of continuous function space and embedding of Bernoulli and polynomial sequences into it. The continuous function space is the set of continuous real valued functions defined on the reals, which are uniformly bounded on compact subsets of the reals. We classify them into six families and find a sequence which is a member of each. We show that the cardinality of each member of each family is not equal. More interesting is to study the sequences generated from both families and to find that some sequences can be embedded into the continuous function space. We give an answer to the question:

Why there are no algebraic sequences in the continuous function space? In this paper we deal with the problem of embedding of a sequence of n th degree polynomials and a sequence of n th degree Bernoulli numbers into the real axis. We prove that there are a sequence of n th degree polynomials and a sequence of n th degree Bernoulli numbers which are embedded into the real axis.
